

Sterling

Stainless Collection

Top grade type 304 Stainless Steel. Welded and polished to perfection. NSF certified product. But the real beauty of EMI's new *Sterling* collection of **Stainless Steel tables** transcends first impressions.

Its true beauty is in the **attention to detail**; it's in the commitment to **fast turnaround** and **affordable prices**, while **never sacrificing quality**. It's in finding the **best way to build a table**; and it's in the knowledge that you're buying a table **made in the U.S.A.**

It's all here in the *Sterling* collection. A collection of **top-of-the-line tables without top-of-the-line-prices**.

The details we feature here are just some of the reasons why this line is a *superior* choice. And why this line will help make **you** a very *savvy* buyer.

Call your EMI representative *today* for complete line pricing and to place your order

The Rest of the World

Welds their tables legs (or leg sockets) to the bottom of the "hat channel".

USA's Better Idea

EMI uses a rectangular reinforcing channel. The leg passes through the bottom and is welded to the top of this channel. It is then also welded to the bottom. Two weld points = zero wobble.

The Rest of the World

Positions their "hat channels" 2"-4" back from the table edge, leaving the 16GA top's turned down edge to fend for itself against attack from errant racks, carts, cases of #10 cans, and more.

USA's Better Idea

Sterling Stainless tables have their rectangular reinforcing channels positioned directly behind the turned down edge. This provides a double wall of protection against dents or dings. Your table retains its new beauty.

The Rest of the World

Ships their tables KD. Lower shelves or bracing are attached with aluminum brackets that can crack or bolts that can loosen. If ordered set up (usually for an extra charge) they are spot welded.

USA's Better Idea

EMI's *Sterling* stainless tables are built with the lower shelf or tubular bracing bead welded to the legs and delivered to you with *no assembly required*. Strong, sanitary and a table that's wobble free.

The Rest of the World

Supplies inexpensive plastic or "pot metal" bullet feet.

USA's Better Idea

All *Sterling* stainless tables live up to their name with stainless steel adjustable bullet feet.
